

Macro called "pingHosts" used for input parameter. The "pingHosts" macro is defined in the resource configuration panel for the resource group the reporter will run on (here it's the "defaultGrid" resource group). The value for "pingHosts" here is:

```
cuzco.sdsc.edu  
inca.sdsc.edu  
badhost.sdsc.edu
```

The image shows a screenshot of a configuration interface with several panels. A red box highlights a section in the top right panel. A red arrow points from this box to a text box above. Another red arrow points from the same box to a text box on the right. A third red arrow points from the same box to a text box at the bottom right. A fourth red arrow points from the same box to a red box in the bottom left panel.

In this example the configuration will expand to three ping tests, each running on every "defaultGrid" resource:

- 1) all2all:ping\_to\_cuzco.sdsc.edu
- 2) all2all:ping\_to\_inca.sdsc.edu
- 3) all2all:ping\_to\_badhost.sdsc.edu

In order to be filtered and displayed as all2all tests by the consumer:

- Nickname must begin with "all2all:" followed by "testName\_to\_testedResources"
- Context must include the string "nickname=" followed by the series nickname
